This CDS clone is a part of a collection of human full length
expression clones generated by BD Biosciences Clontech and the
expression clones generated by BD Biosciences Clontech and the
farvard Institute of Proteomics. Each CDS has been cloned in two
forms: with and without stop-codon (to allow fusion with C-terminal
tag). The CDS has been directionally cloned using BD In-Fusion(TM)
cloning system between the SalI the clone: 'ACC' after SalI sites
and before 'ATG' to provide Kozak consensus sequence; 'GG' after
last codon and before HindIII site to maintain reading frame.

This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Pusion(TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL and before Additional Sequences in the clone: 'ACC' after Sall site and before HindIII site to maintain reading frame. Clone distribution: http://bioinfo.clontech.com/orfclones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                other sequences; artificial sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     80
                                                                                                                                                                                                                                                                                       The invention relates to a method of treating an angiogenesis-mediated disorder in a subject. The method is useful for treating angiogenesismediated disorder, e.g., retinal or choroidal neovascularisation or diseases associated with chronic inflammation, myocardial ischaemia, stroke, coronary artery disease or peripheral vascular disease. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13 ATGGACGTCACCATCCAGCACCCTTGGTTCAAGCGCGCCCTGGGGCCCTTCTACCCCAGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           77
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of treating an angiogenesis-mediated disorder in a subject. The method is useful for treating angiogenesis-mediated disorder, e.g., retinal or choroidal neovascularisation or diseases associated with chronic inflammation, myocardial ischaemia, stroke, coronary artery disease or peripheral vascular disease. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ArgLeuPheAspGlnPhePheGlyGluGlyLeuPheGluTyrAspLeuLeuProPheLeu

                                                                                                                  The invention relates to a chimera alpha BNAC polynucleotide that encodes a chimeric alpha BNAC polypeptide. The polypeptide is useful for preventing protein aggregation. The polypeptide is also useful for increasing the shelf life of proteins of pharmaceutical value. The polypeptide shows an increase in accessible hydrophobic regions, forms larger size oligomers, shows an increase in increasumit interaction, forms larger aggregates, forms larger procus oligomers and shows increased ellipticity as compared to eye lens crystallins alpha A and alpha B. The tryptophan residues in the polypeptide are less solvent accessible as compared to those of eye lens crystallins alpha A and alpha B. The polypeptide shows extraordinarily high chaperone-like activity ranging between 3 - 6 times that of the eye lens crystallins alpha A and alpha B. The present sequence represents the chimera DNA that encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   297
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             357
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           417
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          155
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       477
                             New chimera alpha BNAC nucleic acid, useful for preventing aggregation of proteins and also for increasing shelf life of proteins of pharmaceutical

New truncated alpha-crystallin polypeptide derived from a wild-type alpha -crystallin protein, useful for enhancing protein (e.g. insulin or alcohol dehydrogenase) expression or secretion and for preventing protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a truncated alpha-crystallin polypeptide derived from a wild-type alpha-crystallin protein, where the truncated delypeptide lacks an N-terminal sequence present in the wild-type protein. The composition and methods are useful for enhancing protein (e.g. insulin or alcohol dehydrogenase) expression or secretion and for preventing protein agreegation. These may also be used for creating a thermophilic host that tolerates elevated temperatures. The present sequence represents human N-terminal truncated alpha-crystallin DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               70
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 TCCTCTTCCGCACCGTGCTGGACTCCGGCATCTCTGAGGTTCGATCCGACCGGGGACAAG 60

The invention relates to a gene expression profile comprising one or more genes (ABZ34889-ABZ35692) and generated from a cell type. The cell type is a coronary attery endothelium, umbilical artery or vein endothelium, aortic endothelium, dermal microvascular endothelium, pulmonary artery endothelium, myometrium microvascular endothelium, prostate epithelium, bronchial epithelium, mammary epithelium, prostate epithelium, renal cortical epithelium, umbilical artery smooth muscle, neonatal dermal fibroblast, pulmonary artery smooth muscle, neural progenitor cells, skeletal muscle, astrocytes, aortic smooth muscle, mesangial cells, coronary artery smooth muscle, bronchial smooth muscle, uterine smooth muscle, uterine smooth muscle, lung fibroblast, other muscle, bronchial smooth muscle, uterine smooth muscle, lung fibroblast, osteoblasts or prostate stromal cell. The gene expression profile is used
                                                                                                                               130
                                                                                                                                                                                                   150

for determining the level of RNA expression for a sample, determining the phenotype of a cell and distinguishing cell types. The gene or a protein expression profile is useful in identifying disease pathologies involving alterations of gene expression. The assessment of expression profiles may provide meaningful information with respect to tumour type and stage, treatment methods, and prognosis. The gene or protein expression profile may also be used for creating microarrays is useful for genetic and physical mapping of genomes, DNA sequencing, genetic or medical diagnosis, genotyping of genomes, confirming cell or tissue identifications and in identifying promising antibiotics, antiviral or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a composition comprising an isolated amino acid sequence that comprises a portion of human mitochondrial callate dehydrogenase protein (MDH), particularly the minimum activator of DNA fragmentation sequences. The Composition is useful for treating cancer chosen from liver cancer, prostate cancer, head cancer, nack cancer, lung cancer, breast cancer, prostate cancer, scomach cancer, pancreatic cancer, colon cancer, covarian cancer, stomach cancer, muscle cancer, mouth cancer, tongue cancer, gum cancer, skin cancer, muscle cancer, without cancer, cancer, cancer, skin cancer, bladder cancer, things cancer, uterus cancer, thymes cancer, thymphoma cancer, uterus cancer, thymus cancer, thymosic cancer, brain cancer, neuron cancer, gall bladder cancer, thyroid cancer, brain cancer, neuron cancer, gall bladder cancer, cancer, joint cancer, glioblastoma, mesothelioma, lymphoma, leukaemia, melanoma, squamous cell carcinoma, osteosarcoma, and Kaposi's sarcoma. The present sequence is a coding sequence shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 AGCCGCCTCTTTGACCAGTTCTTCGGAGAGCACCTGTTGGAGTCTGATCTTTTCCCG--- 117

The invention relates to a hybrid protein chaperone for stabilising proteins and/or protein activities. Protein chaperones (also known as hate shock proteins) are divided into 4 families on the basis of their primary sequence and chaperone properties: HSP90, HSP70, HSP60 and sHSP (small heat shock protein). The invention is based upon the finding that among the sHSP family, which have a general structure of a central domain (called the alpha-crystallin domain) flanked by N and C-terminal regions, replacement of one or more regions of an sHSP with the corresponding region from a second sHSP can improve the activity compared to native sHSPs. In a particular embodiament of the invention, the hybrid chaperone of sHSPS. In a particular embodiament of the invention, the hybrid chaperone of central portion of alphab-crystallin and the C-terminal tail of HSP27. However, the hybrid protein chaperones of the invention can comprise central portion of alphab-crystallin and the C-terminal tail of HSP27. However, the hybrid protein chaperones of the invention can comprise control as enzymes, therapuetic proteins, diagnostic proteins, reporter proteins or antibodies, their fragments or conjugates in an aqueous solution using hybrid protein chaperones; actualistic protein chaperones in the case protein chaperones; are useful as agents to chaperone; nucleic acids and vectors encoding a hybrid protein chaperone. The hybrid protein chaperones are useful as agents to protein adpression of a recombinant protein of interest and a hybrid protein chaperone. The hybrid protein chaperones are useful as agents to prove the comprision of proteins that are in the strong conformations (e.g., cardiomyopathies, cararacts or meurodegenerative diseases. The present sequence represents a mutant conformations (e.g., cardiomyopathies, cararacts or mutated from T (see ADE75375) to generate a unique Aval restriction site which was used for subsequent casester mutategenesis (alung victor of the treatment of such assets are unique Aval restriction sit alphaB-crystallin.

The invention relates to a hybrid protein chaperone for stabilising proteins and/or protein activities. Protein chaperones (also known as heat shock proteins) are divided into 4 families on the basis of their primary sequence and chaperone properties: HSP90, HSP70, HSP60 and SHSP (small heat shock protein). The invention is based upon the finding that among the SHSP family, which have a general structure of a cental domain (called the alpha-crystallin domain) flanked by N and C-terminal regions, replacement of one or more regions of an SHSP with the corresponding region from a second SHSP can improve the activity compared to native SHSPs. In a particual moment of the invention, the hybrid chaperone is a hybrid sHSP designated alphaB-HSP27 comprising the N-terminus and central portion of alphaB-Grystallin and the C-terminal tail of HSP27. However, the hybrid protein chaperones of the invention can comprise regions from HSP90, HSP70 and HSP60 families as well as from the SHSP family. The invention also encompasses methods for stabilising proteins such as enzymes, their fragments or conjugates in an aqueous

cancer associated gene.

The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AGCCGCCTCTTTGACCAGTTCTTCGGAGAGCACCTGTTGGAGTCTTTTTCCCG--- 142

The present invention describes a method (MI) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent cobe tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic artivity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such scolon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19

The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent cobplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 or ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in producing a product which is anti-neoplastic agent, and can be used for producing a product which is canti-neoplastic agent. M1 can be used in the treatment of cancer such the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oseophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature owners and ser

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to methods of diagnosing breast cancer in a patient, which comprise detecting the level of expression in a tissue sample of two or more genes selected from those shown in ABT09867-ABT1112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients. The methods are also useful as a screening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be used as diagnosite markers for the prediction or identification of the malignant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coding sequence of the invention. Note: The sequence data for this patent electronic format directly from WIPO at

The invention relates to a method of diagnosing (I) the onset or progression of benign prostatic hyperplasia (BPH), or screening (II) for or identifying an agent that modulates the onset or progression of BPH.

The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate collections are compared to normal prostate tissue. (I) comprises compared to normal prostate tissue in prostate cells from the subject that are differentially regulated compared to normal prostate cells. (II) comprises preparing a first gene expression profile of BPH cells or BPH-like cell population, exposing the calls to the agent, preparing a second gene expression profiles. (I) is useful calls, and comparing the first and second gene expression of BPH. (II) is useful is useful for diagnosing the onset or progression of BPH. (II) is useful conference or language that modulates the onset or progression of genes conference or cells, by comparing the expression level of genes given in the specification in the tissue or cells to the level of expression of gene in the database, and displaying the expression level or expression level in the tissue or cell sample compared to the expression level in public prostate cancer. ABK64106-ABK64860 represent human benign prostatic hyperplasia gene sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  382
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IleHisGlyLysHisAsnGluArgGlnAspAspHisGlyTyrIleSerArgGluPheHis 115

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel purified complex comprising a first polypeptide and a second polypeptide, where the polypeptides comprise defined amino acid sequences listed in the specification, and where the first polypeptide binds to the second polypeptide. A complex of the invention has virucide and cytostatic activity, and may have a use as a vaccine. The complex is useful for identifying agents for treating or preventing a conditions involving altered level of the complex, e.g. human papilloma virus (HPV) infection, or cancer. The compositions, antibodies, vectors and methods are useful for treating such diseases. The sequences shown in ADF09584-ADF09697 represent cDNA's of the

The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different issues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTS are not enternated and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs SETS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain

                                                                                                                                                                                                                                                                                                        The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the disgnostic, prognostic and statistical methods of the invention. This sequence corresponds to a

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (TTR) of the mRNA because they are often obtained from oligo-dT primed cDNA ilbraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                  The present sequence is one of a large number of 5' BSTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' BSTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. BST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such BSTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' BSTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ||||||||::: ||| |||||||||| :::|||
